Day 8 journal entry

Matthew Madewell

Prompt option 2: How has this experience affected or changed your career/college plans?
This experience has given me more insight into specific jobs in the tech space. Before this internship, I had assumed that most of the tech jobs were coders and people who worked with the actual software. Now, I know that many people are involved in the process of making that software and each person works on a specific piece. I can use that knowledge in college to find out the parts of the process I enjoy the most to give me a better insight into what I want to do in the future.
